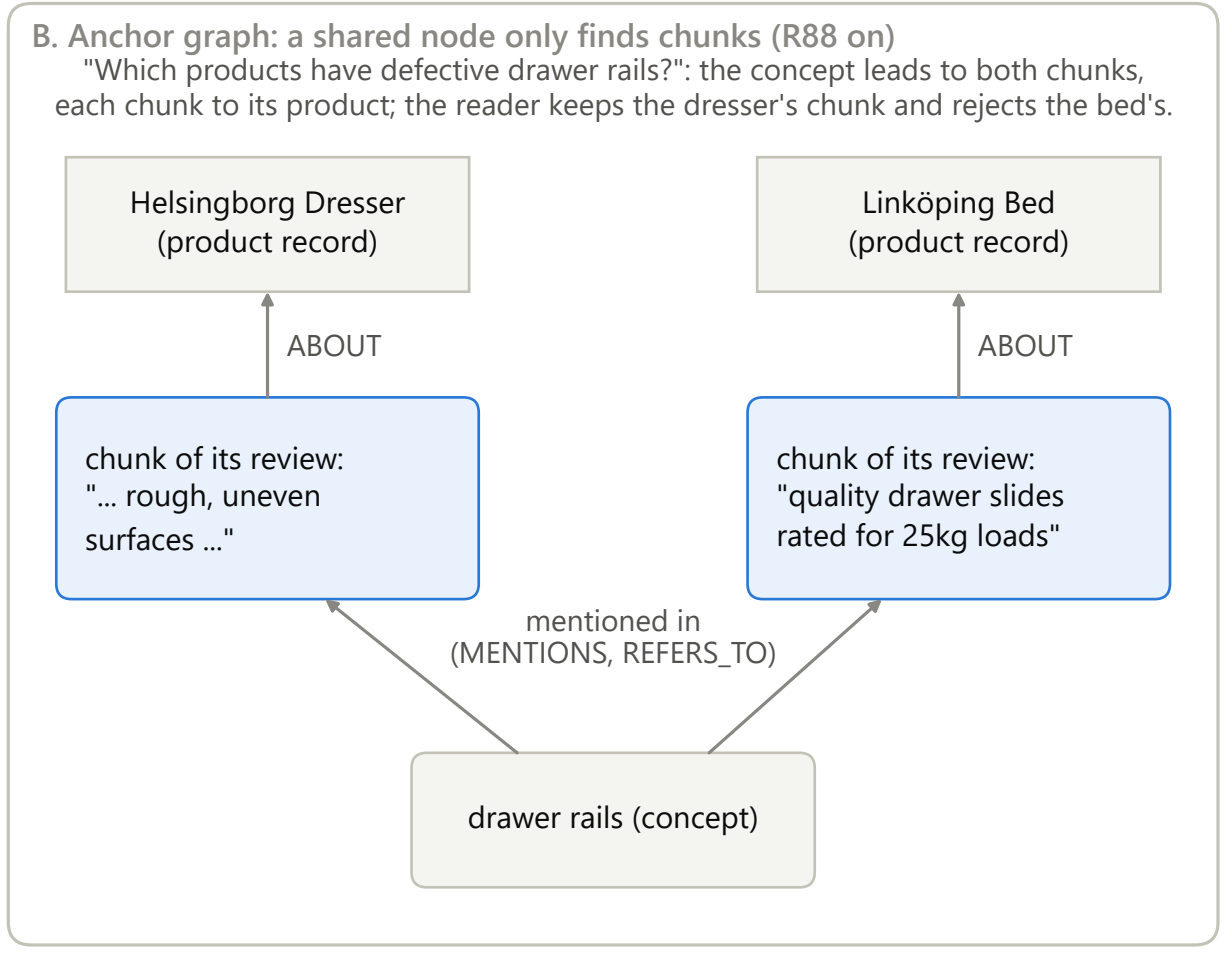
A. Claims stored as edges between shared nodes (up to R62)
Helsingborg Dresser (product record)
Linköping Bed (product record)
has part
has part
drawer rails
path read as a fact: "the bed's rails are defective" (wrong: its review praises "quality drawer slides")
HAS_DEFECT (from the dresser's review)
rough, uneven surfaces



B. Anchor graph: a shared node only finds chunks (R88 on)
"Which products have defective drawer rails?": the concept leads to both chunks, each chunk to its product; the reader keeps the dresser's chunk and rejects the bed's.
Helsingborg Dresser (product record)
Linköping Bed (product record)
