User: web interface or command line
Builder (Chapter 4)
goal
Goal
one sentence
Tables
CSV, JSON, NDJSON,
PostgreSQL
Documents
Markdown, text,
PDF
profile
types, keys
plan
record plan
build
validate, import
ingest-text
chunk, embed
text-schema
fact types
extract
claims + quotes
attach
ABOUT edges
link, resolve
rules; LLM only
for near misses
mention-pass
mentions
Every model output is parsed and checked by code;
every item from text keeps a verbatim quote.
Neo4j
anchor graph
+ vector index
+ full-text index
DuckDB
staged tables
tables staged as they are
Query engine (Chapter 6)
screen: refuses requests
to change the data
12 read-only
tools: graph,
text, tables
agent
one typed call
per turn
checks: citations, form, outcome
answer with citations, or
clarify / out of scope / refuse
MLflow: one run per stage and per question set; every model call with its tokens, cost and latency; LLM response cache
