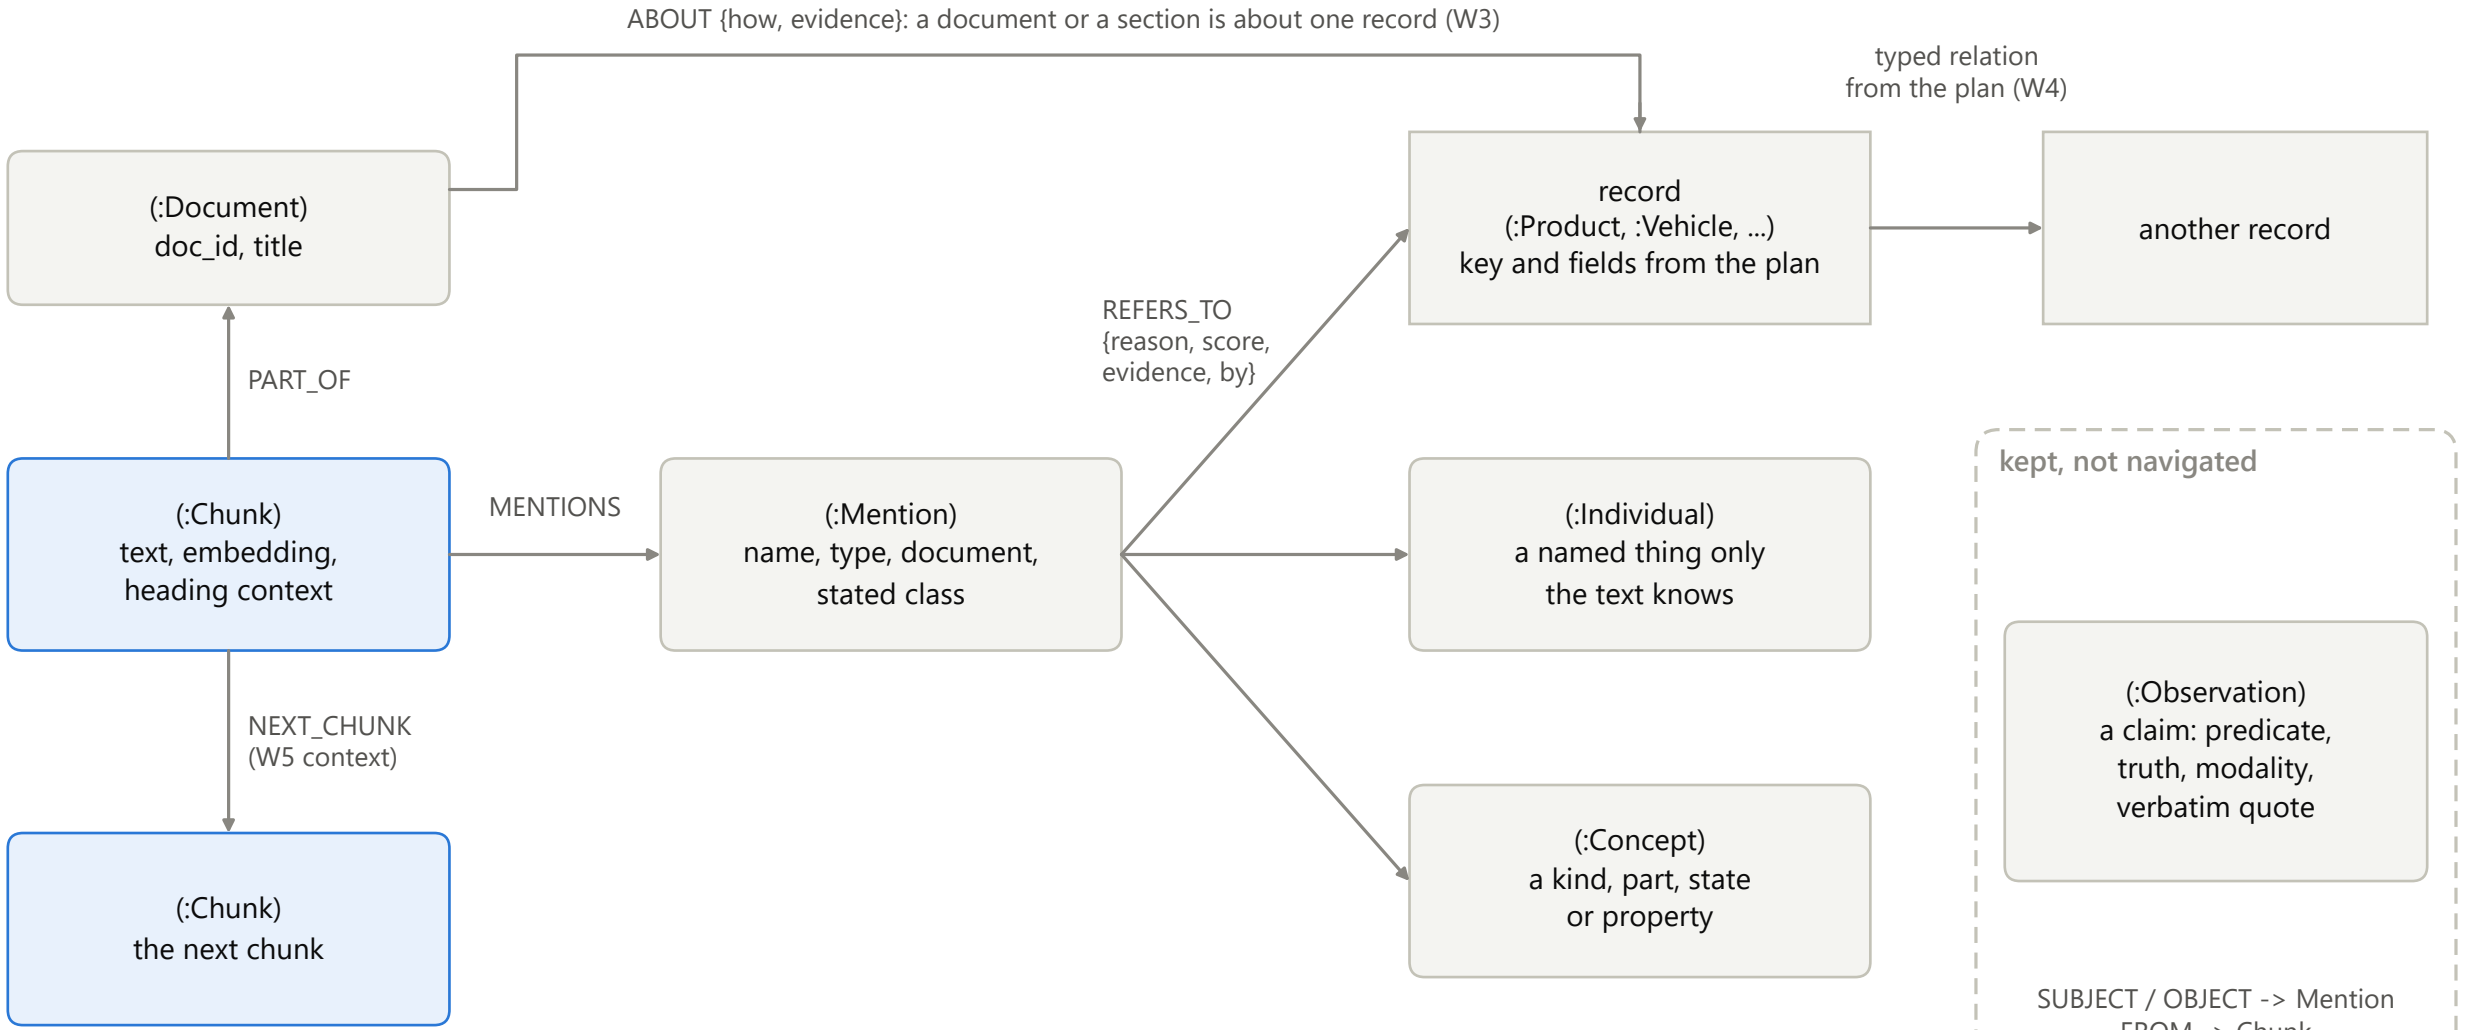
The anchor graph: text is linked to the records and things it mentions; every link carries its reason, and the claims are kept aside

The final graph model (R88-R230). Square: a record from a table; rounded: a node made from text; blue: a chunk. Dashed frame: stored but not used to navigate.



W1 find: a name or alias -> its record, individual or concept. W2 chunks of a node: back along REFERS_TO and MENTIONS, and ABOUT. W3 what a chunk is about or names (records and individuals, never a concept). W4 related records: the plan's relations. W5 context: neighbouring chunks, the document.
