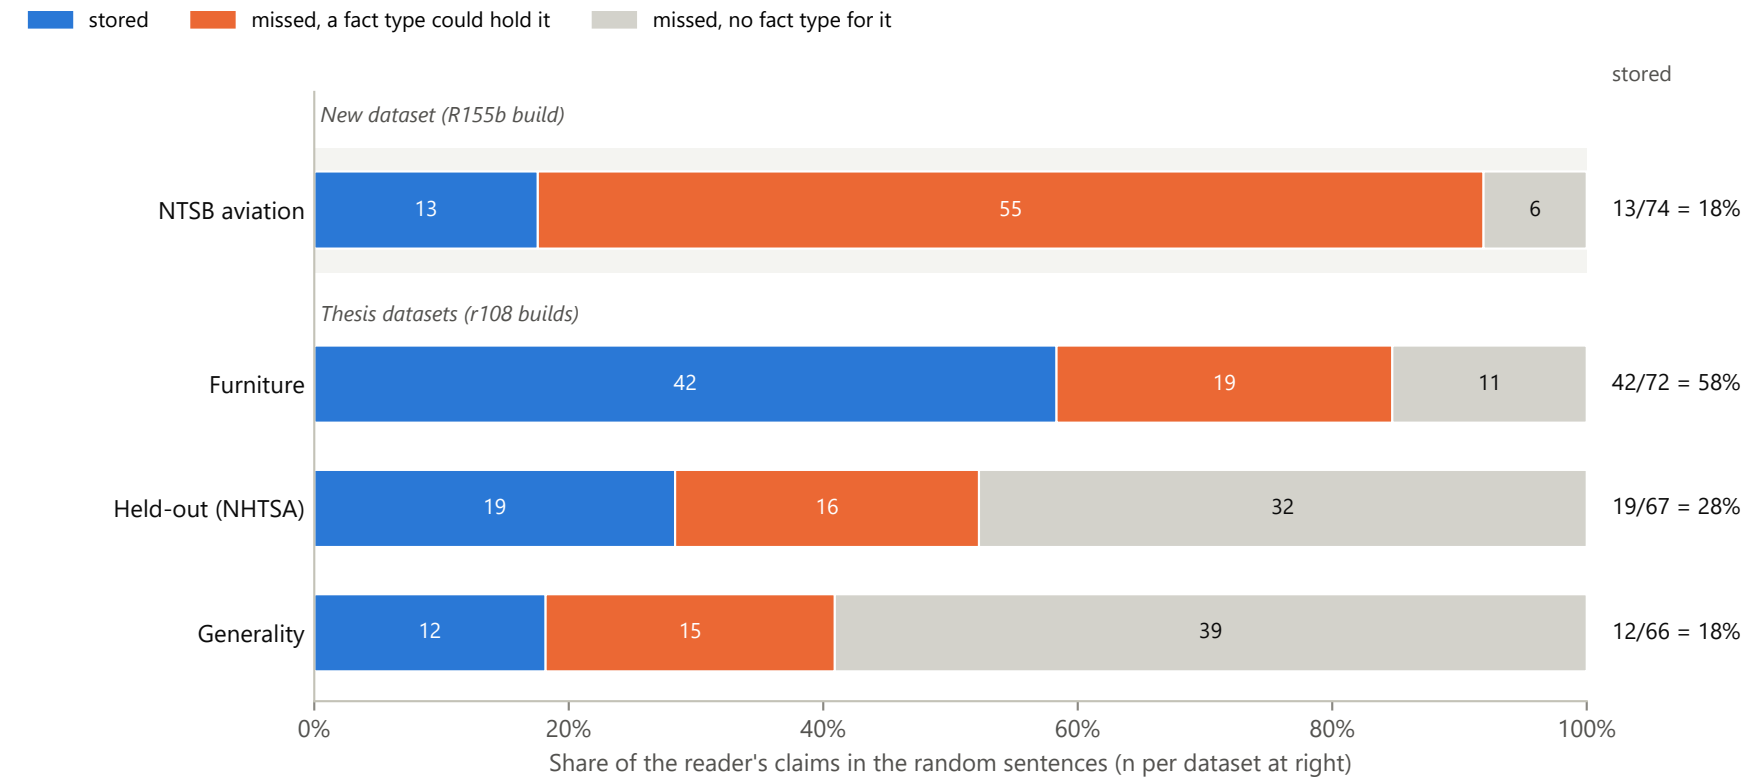
The builds store few of a reader's claims: from 18% to 58% (furniture)


Selected comparison of 4 of the 5 measured datasets; see the captions.
R111 and R226: every claim a careful reader lists for 40 random sentences per dataset (written blind, R77 / R225), matched by a blind judge to the stored claims.
Orange: a fact type existed (the model's miss); gray: no fact type could hold it (the schema's). The numbers in the bars are claims.
