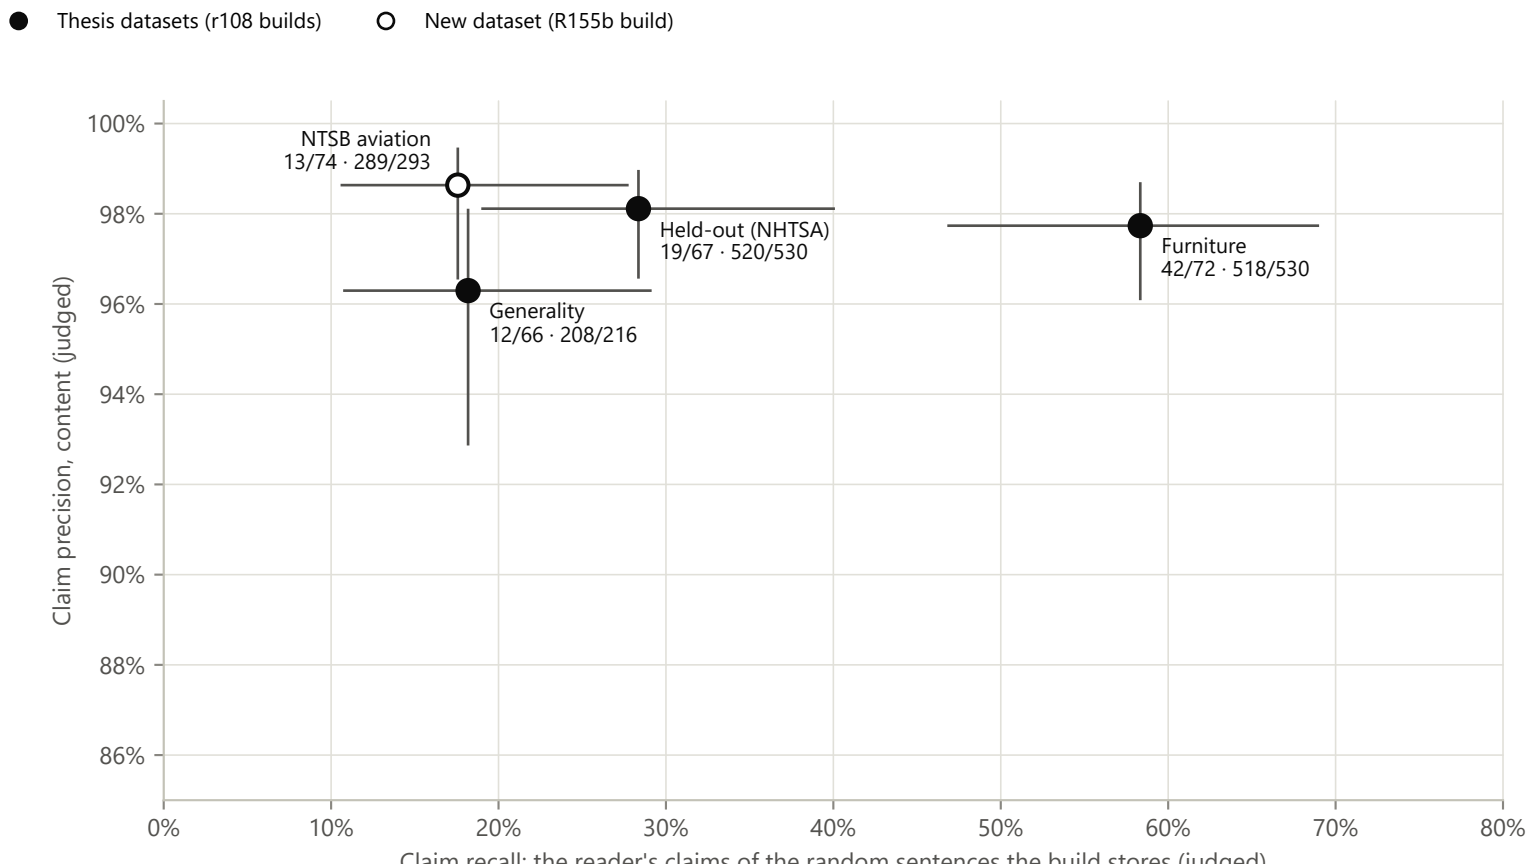
Every build shown is precise; recall is what separates them


Selected comparison of 4 of the 5 measured datasets; see the captions.
R110/R111 and R226: each dataset's content precision (all stored claims) against its claim recall (the reader's claims of 40 random sentences). Lines: 95 % Wilson intervals on both axes; labels: recall k/n · precision k/n. The y axis starts at 85 %.
