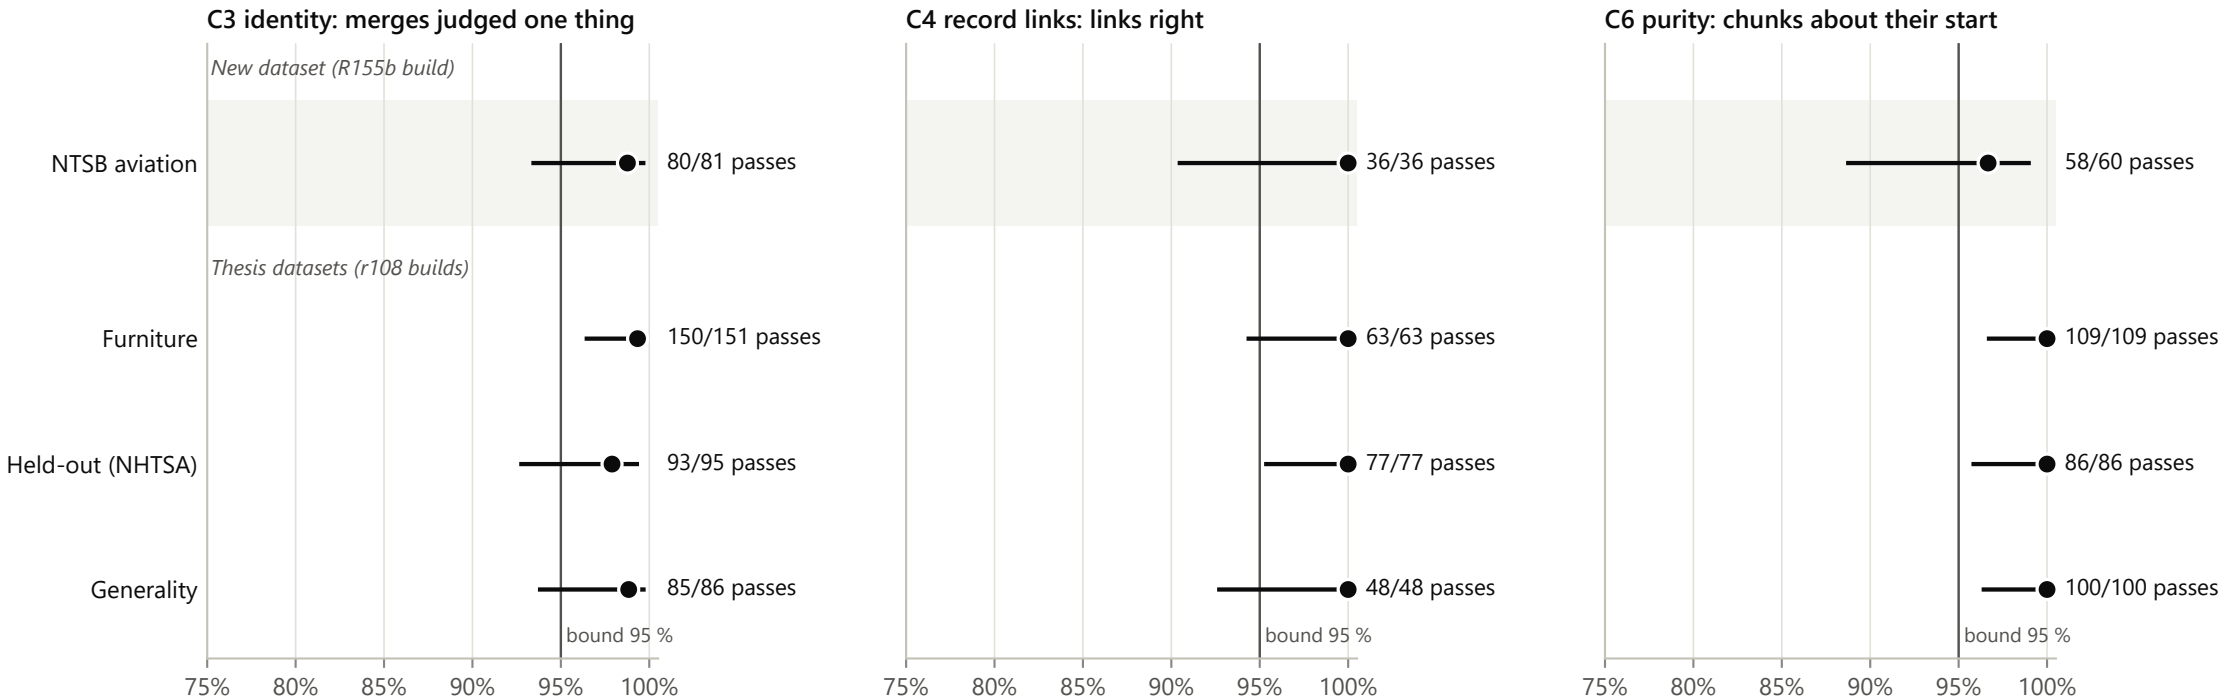
4 of the 4 builds shown pass every audit criterion (a selected comparison)


Selected comparison of 4 of the 5 measured datasets; see the captions.
R108 (thesis datasets) and R228 (NTSB), judged blind by Claude Opus 5.5 under R93's rules. Each row: the judged rate with its interval and k/n; bold = the criterion's hard rule fails. C3 also fails on a wrong record link (C4's), so a 100 % merge rate can fail; the bound line applies to C4 and C6.
