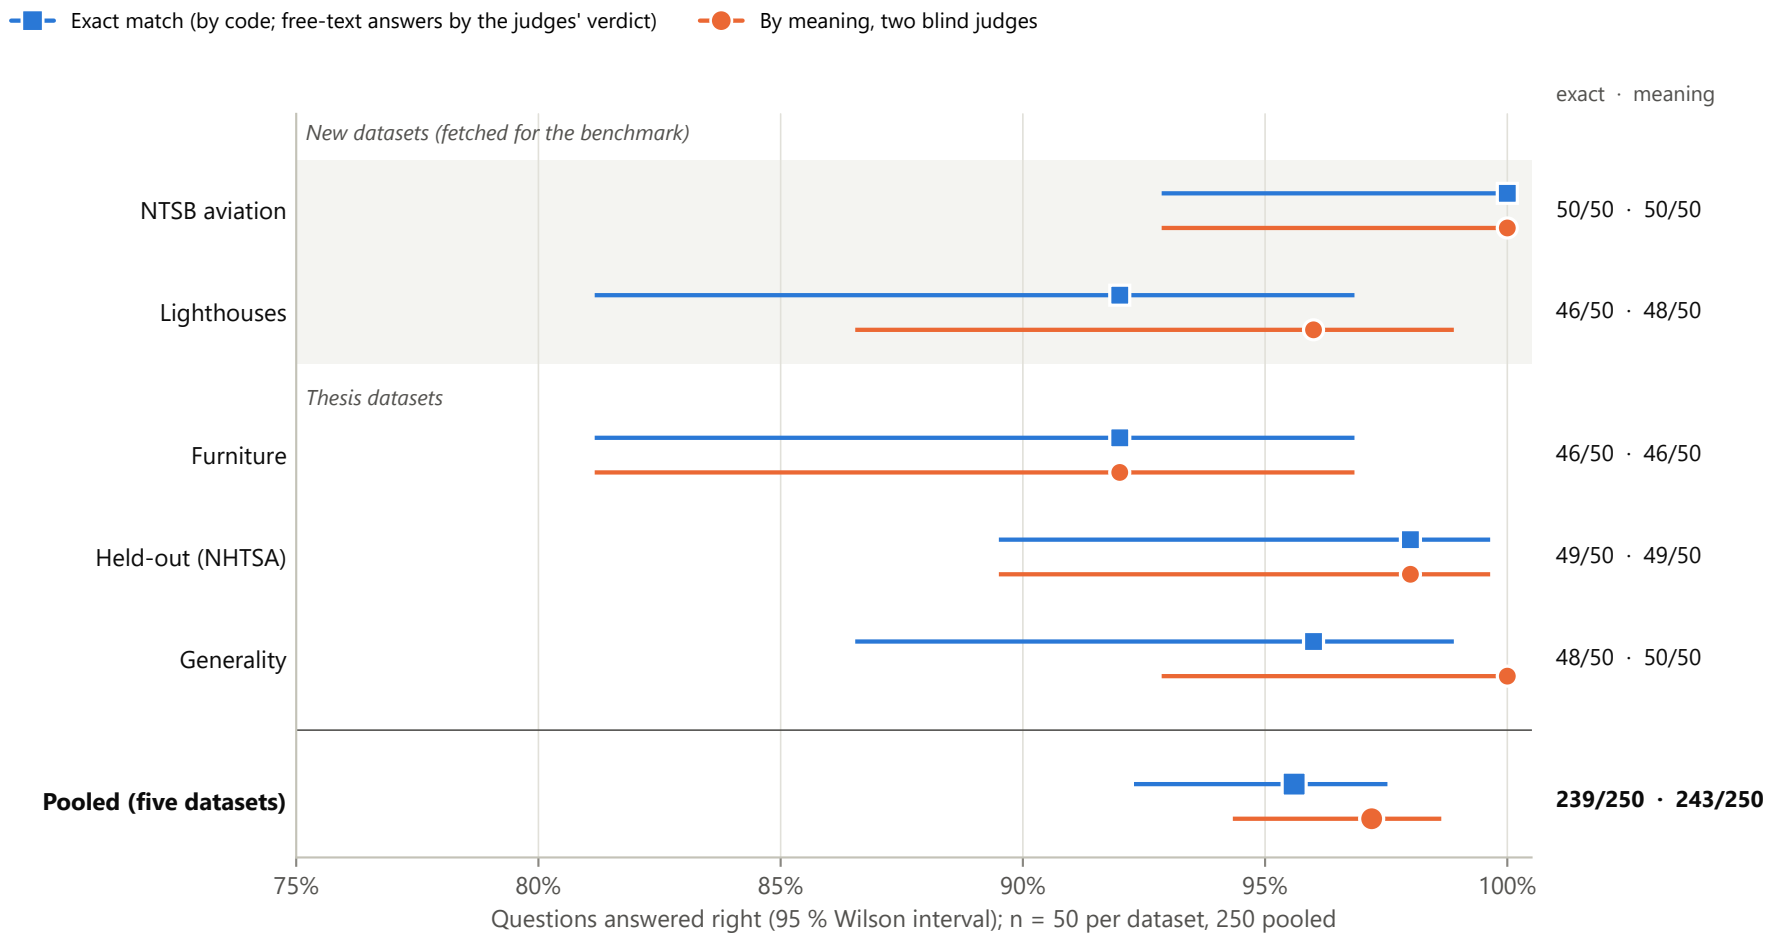
The frozen agent answers 243 of 250 unseen questions right by meaning, as well on the new datasets as on the thesis ones


R156-R157: 50 gold questions per dataset, written before any output. Each row: the exact-match score (square) above the score by meaning (circle); lines are 95 % Wilson intervals; the counts at right are k/n. The axis starts at 75 %. Exact match: code scored 216/227; the 23 free-text answers have no exact form, so their exact-match outcome is the judges' verdict (23/23 right).
