On unseen questions the agent answers 97.2%, 94.0%, 98.0% right by meaning (243/250, 94/100, 98/100); every interval overlaps the others

Three measurements in time order, each on its own questions written before any output: the frozen engine (R157), the engine before the R167-R170 fixes (R166) and after them (R173).
Each row: exact match (square) above the score by meaning (circle); lines are 95 % Wilson intervals; the counts at right are k/n. The axis starts at 75 %. The sets differ, so a difference is not attributed to the fixes.
