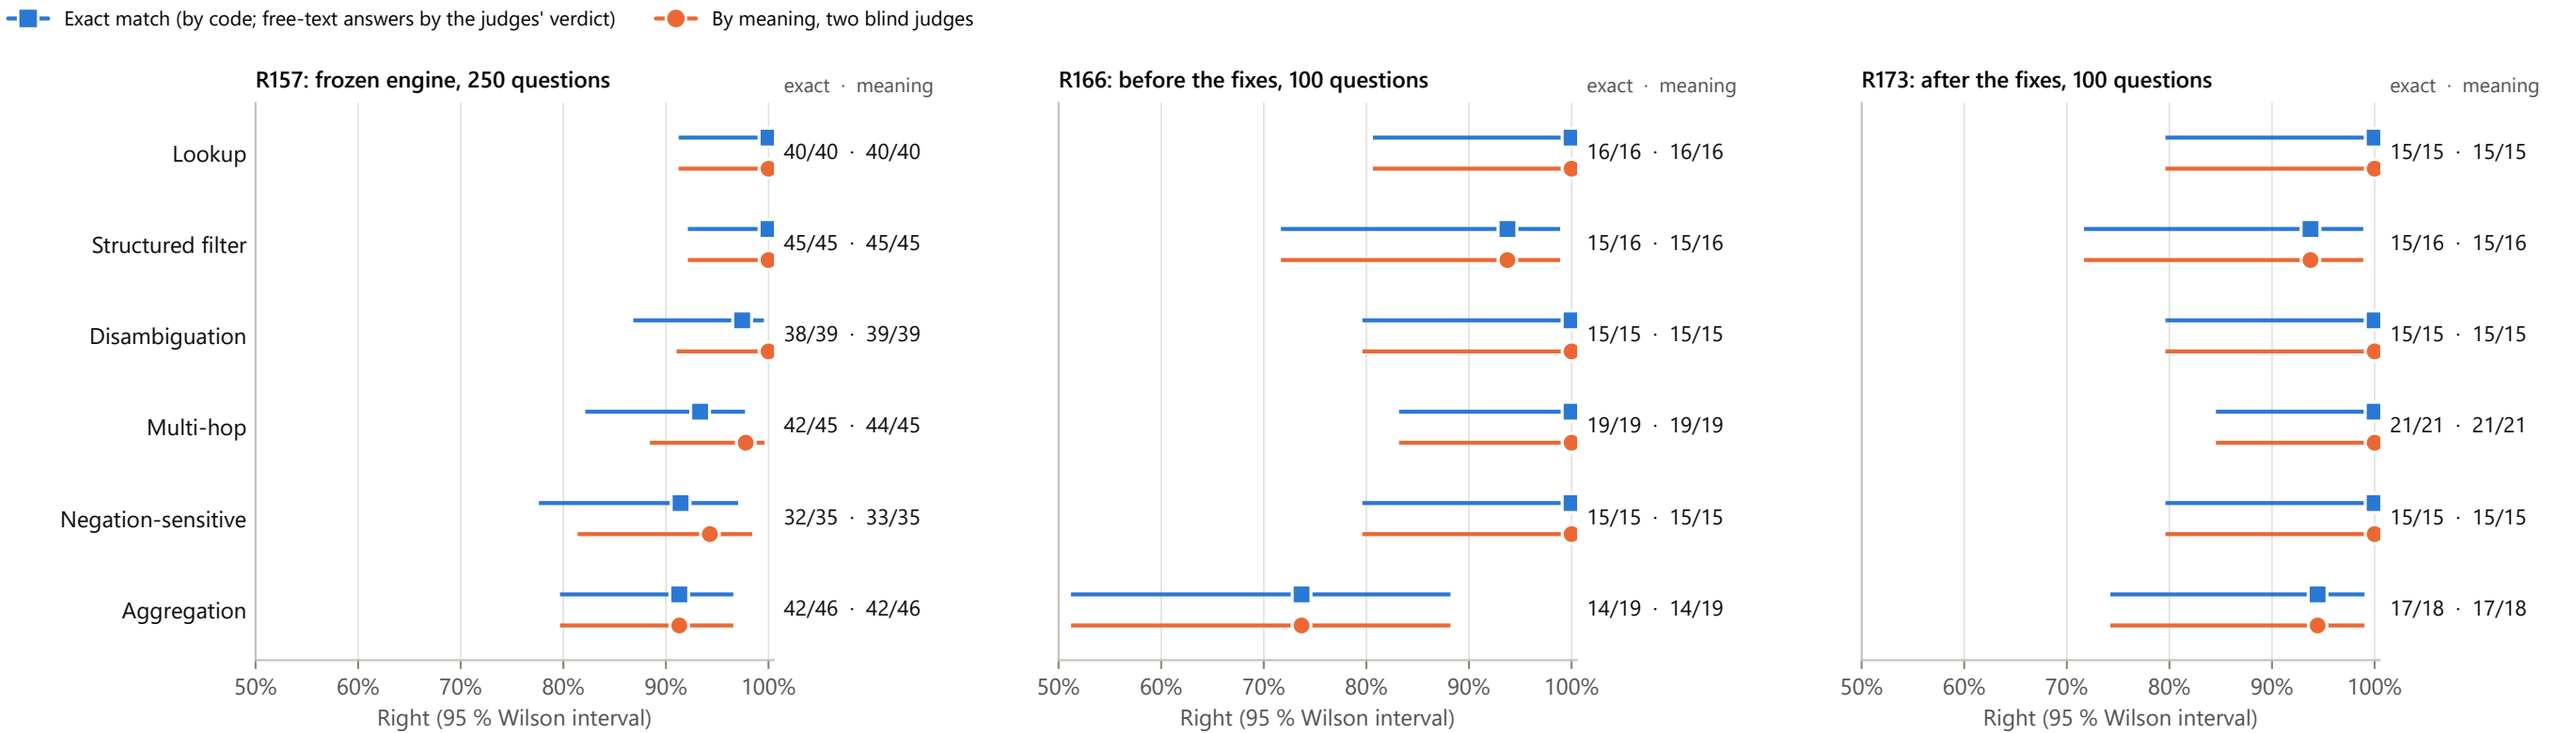
Aggregation, the weakest type, goes 42/46 to 14/19 to 17/18 by meaning across the three measurements; the other types stay near the top


The questions of each measurement by the type the gold gives them (n per type: 35-46 in R157, 15-21 in R166 and R173). Square: exact match; circle: by meaning; lines are 95 % Wilson intervals; the counts at right are k/n. The axis starts at 50 %; an interval of 15-20 questions is wide.
