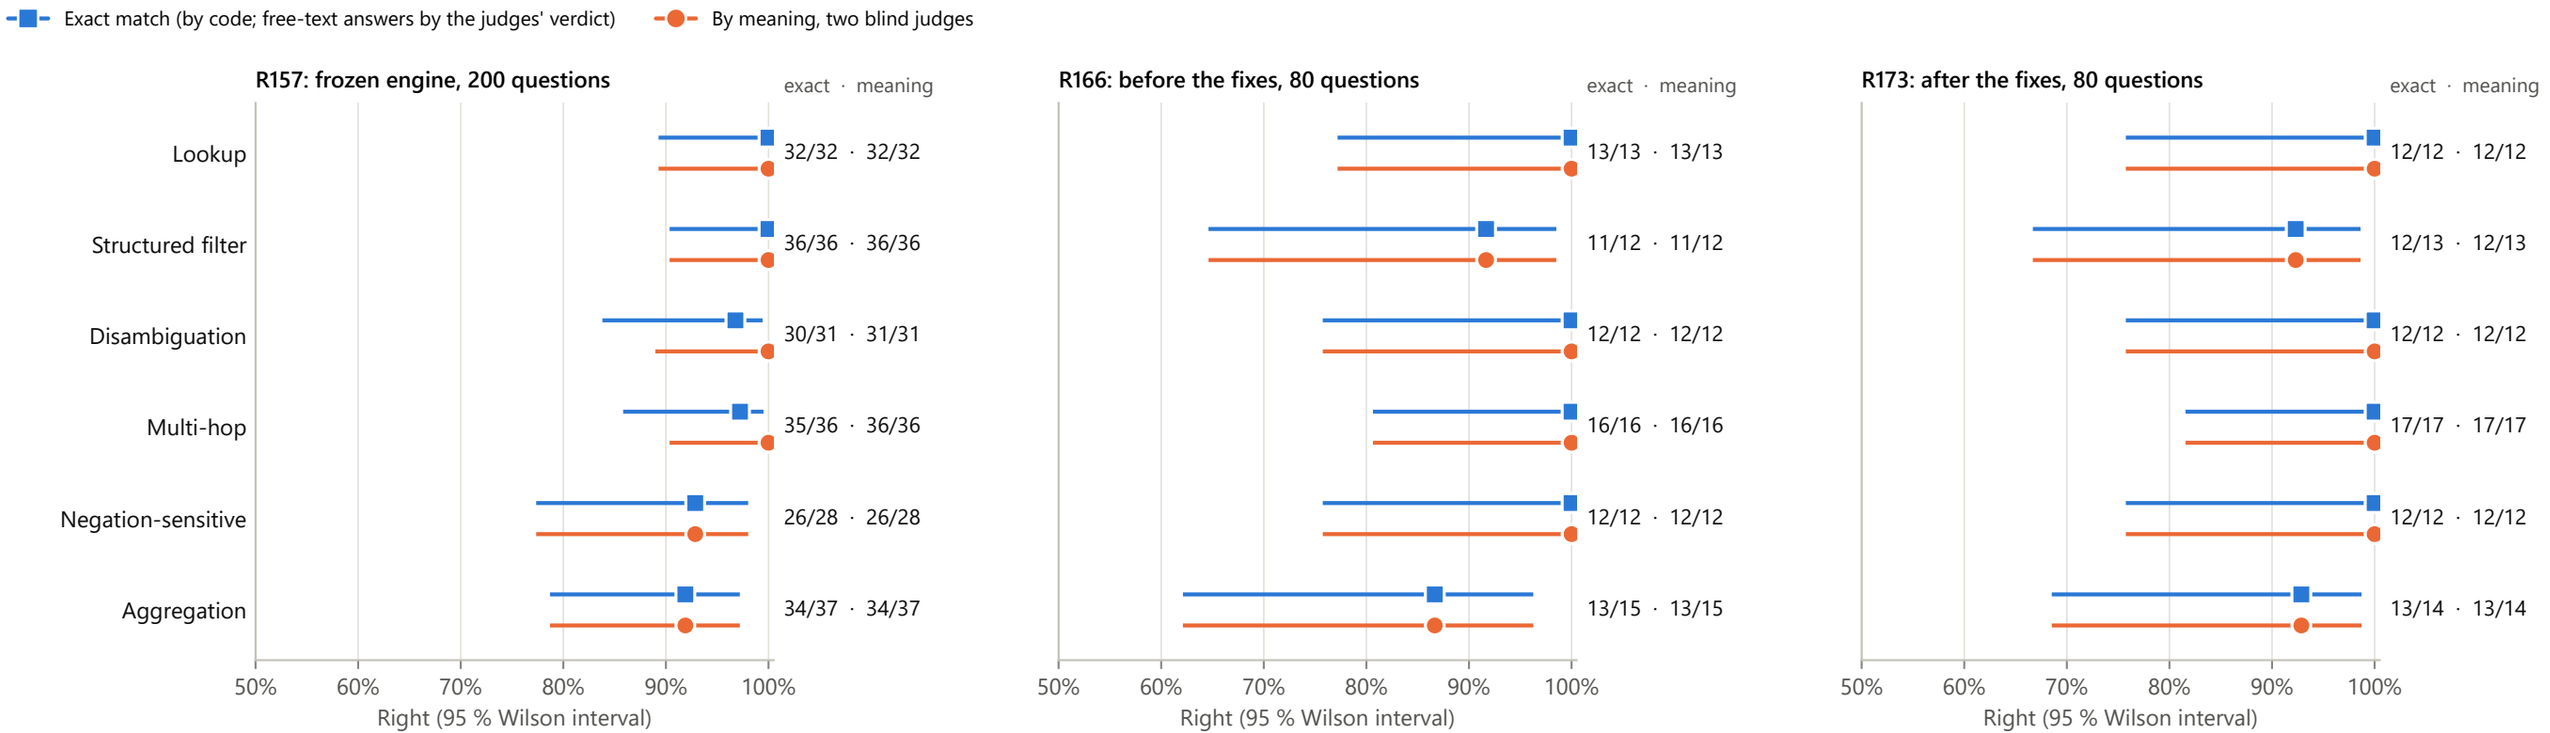
Every question type stays at 87% or more by meaning; the weakest is aggregation (34/37), aggregation (13/15), structured filter (12/13)


Four datasets: NTSB, furniture, held-out, generality. Each measurement's questions by the type the gold gives them. Square: exact match; circle: by meaning; lines are 95 % Wilson intervals; the counts at right are k/n. The axis starts at 50 %; an interval of 12-17 questions is wide.
