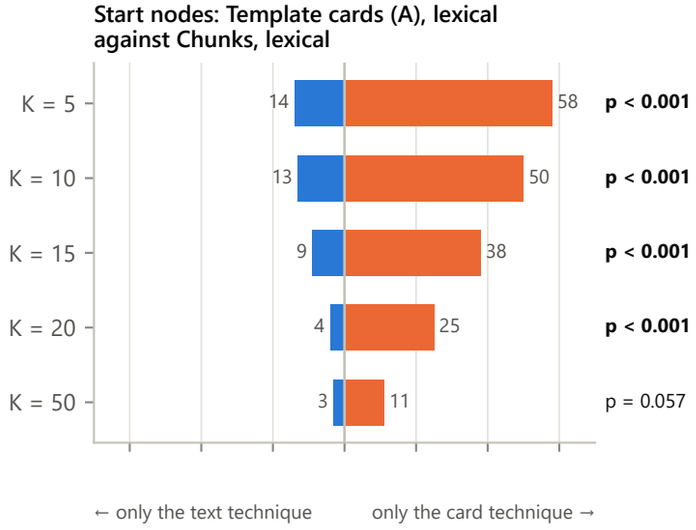
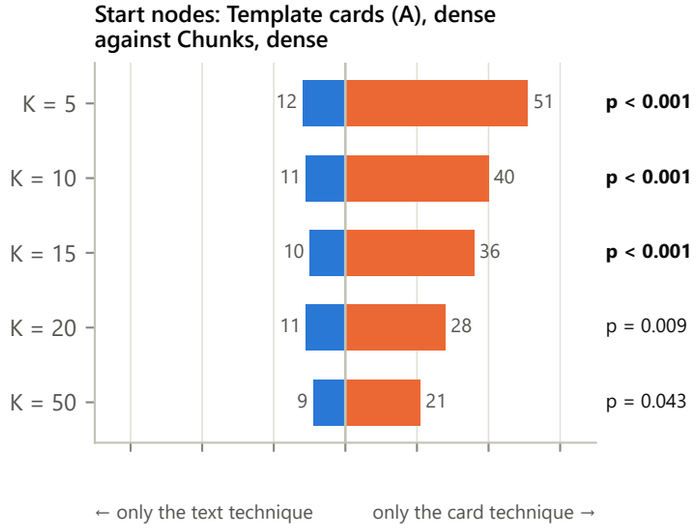
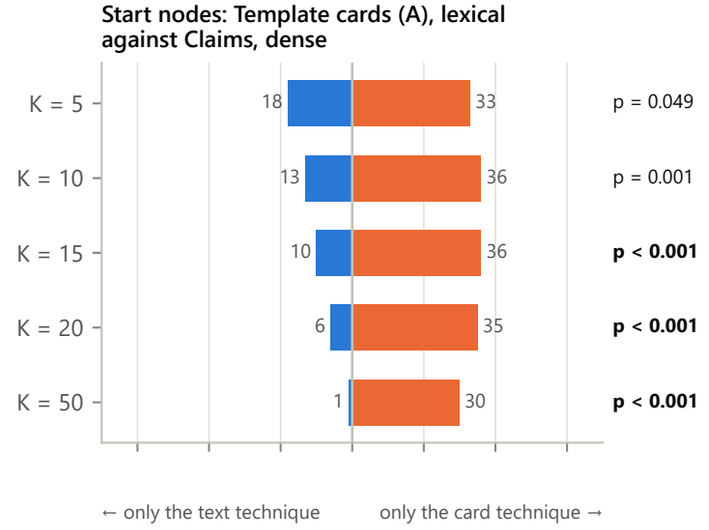
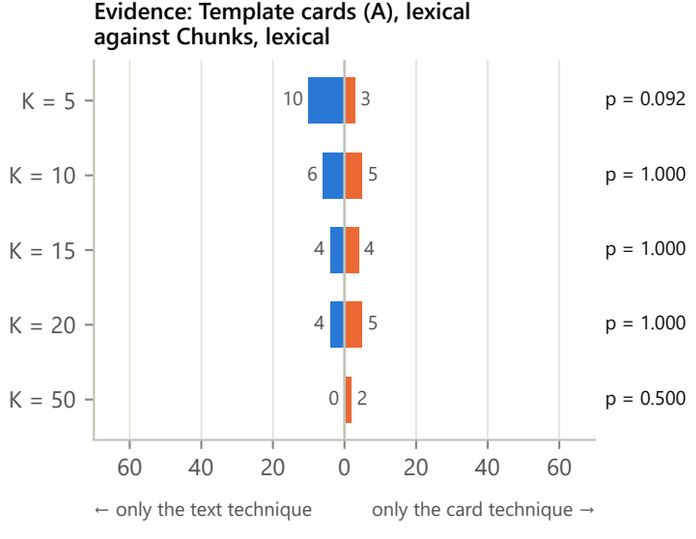
Where card and text techniques disagree, question by question

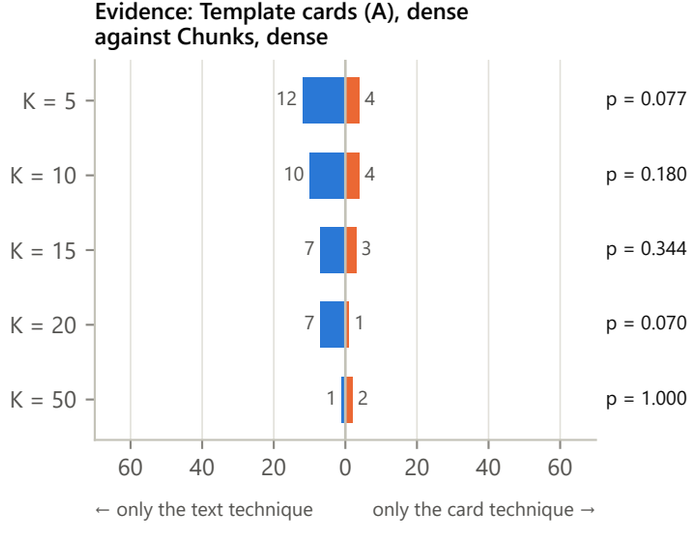
Pooled over three datasets (R128); exploratory pairings, chosen after the table was seen. Bars: questions only one of the two gets fully right.











How to read

Right (orange): questions only the card technique gets fully right.
Left (blue): questions only the text technique gets fully right.
Questions both or neither get right are left out: they say nothing about which is better.

Start nodes: every target in the top K seeds.
Evidence: every gold chunk in the top K.

p: exact McNemar test. Bold: $p < 0.00125$, which survives a Bonferroni correction over the 40 exploratory tests.
